WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

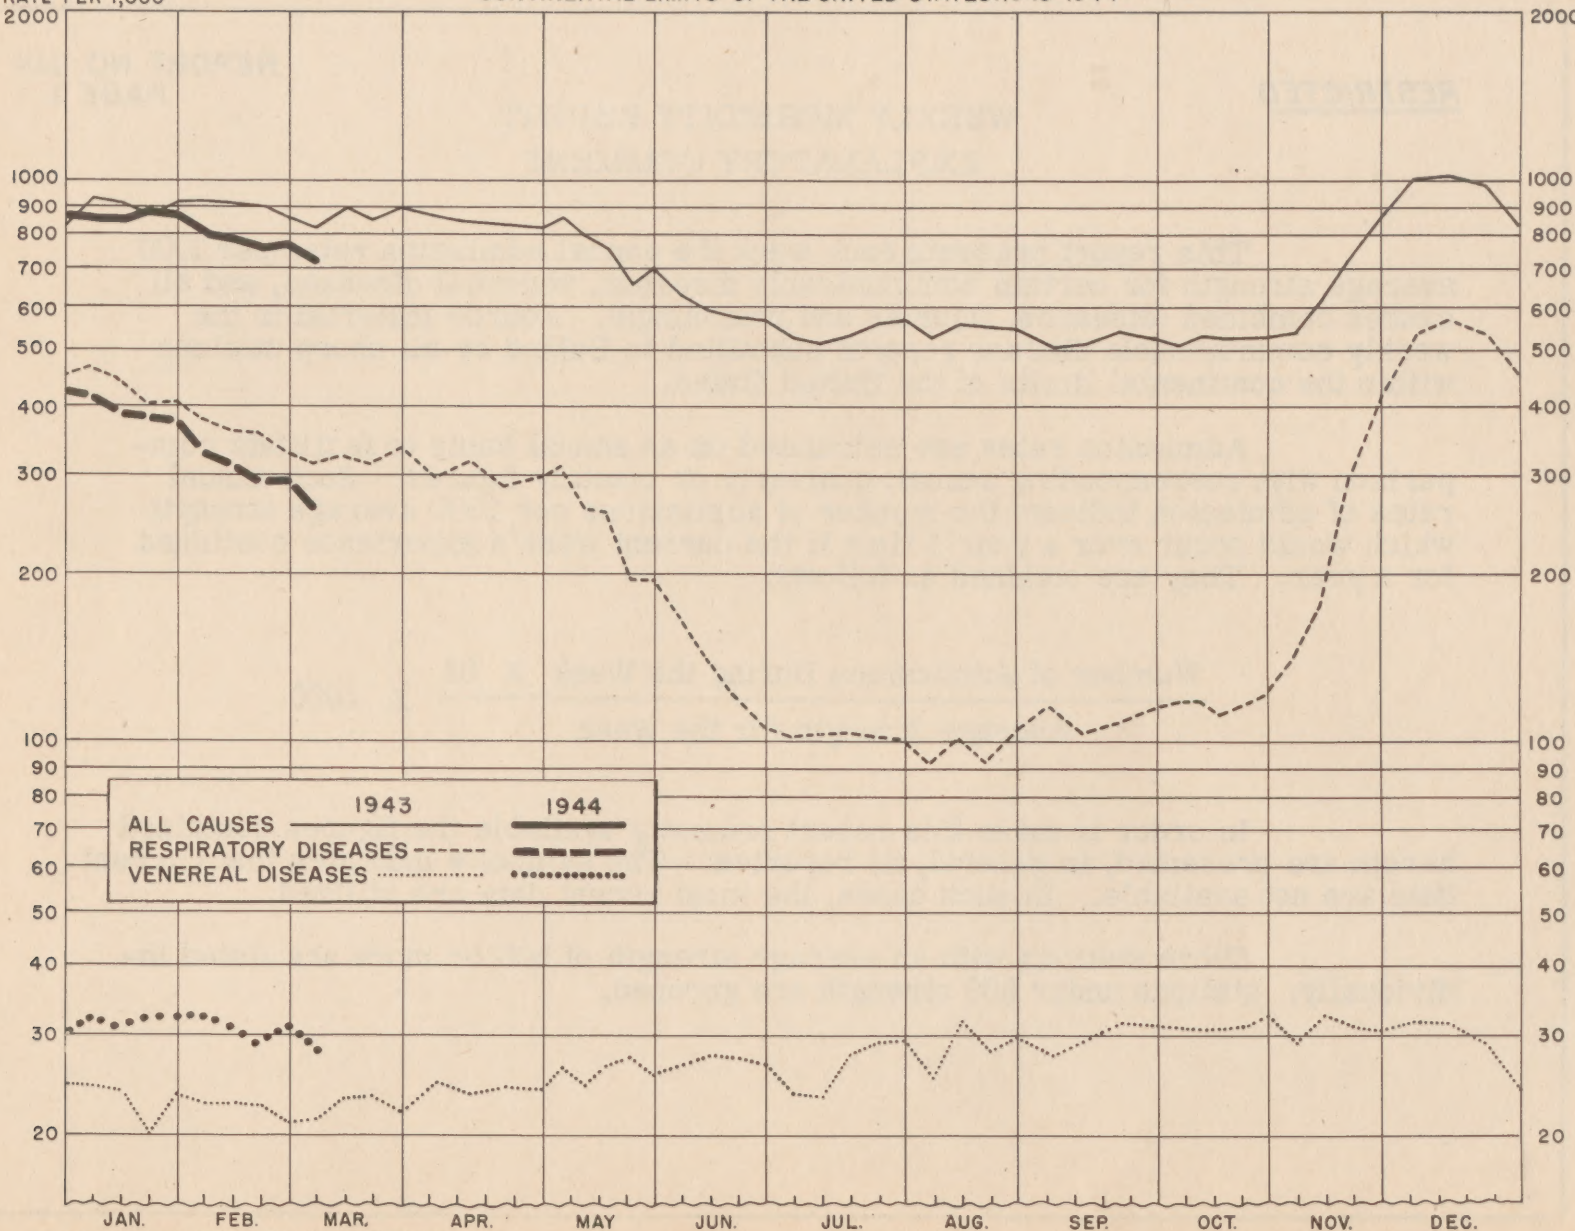

RESTRICTED

PAGE 3

CURRENT TRENDS

Week Ending 4 Mar 1944

After a slight rise last week, the curve for Admissions All Causes this the 10th week of the year again resumes its downward course. Likewise, the fall in the respiratory disease curve continues this week after the slight rise of last week. The venereal disease rate dropped below 30 this week for the 2nd time this year.

Influenza and Catarrhal Fever. For the 12th consecutive week the rate for these infections continues to fall. In every District but one (in which the rate was already low) the trend was downward. The highest rate is reported from the 9th District, the lowest from the 7th District. The rate now stands well below that of the corresponding weeks of 1942 and 1943.

Pneumonia--Broncho and Lobar. The incidence of these infections has gradually fallen during the past 12 weeks until the rate stands at one-half that recorded for the week at the peak of the recent influenza epidemic (the week ending 11 Dec 1943). The rate of 4 for the week is below that of the corresponding weeks of 1942 and 1943. The highest rate, that for the 13th District, is more than twice that of any other District.

Pneumonia, Atypical. The rate for pneumonia, atypical, continues at 4 where it has stood for the past 5 weeks. Though well above the rate for the corresponding week of 1943, the present rate of 4 is still below the peak rate recorded for the week ending 11 Dec 1943. The 11th District again reports the highest rate, 13. The 12th District reports no cases.

Rheumatic Fever, Acute. The rheumatic fever curve continues on a rather high plateau with a rate this week of 5. The variation in the rates in the different Districts is striking; the 7th District reports no cases, the 13th District reports a rate of 18, the 9th District a rate of 12.

Scarlet Fever. Though the trend for scarlet fever has been generally downward for the past 6 weeks, the rate is still comparatively high. The present rate of 11 was only exceeded

REPORT NO. 114

PAGE 4

CURRENT TRENDS--CONTD.

during the two seasonal peak periods of the year 1943. The rate for this 10th week of the year is well above that of the corresponding weeks of 1942 and of 1943. Extreme variation in the rates in the different Districts is even more striking than is the case with rheumatic fever; the 9th District reports a rate of 34, the 13th District a rate of 31, while the 7th District reports no cases.

Cerebrospinal Fever, Meningococcic. The rate for this infection remains low, the curve standing at the lowest point recorded since the week ending 27 Nov 1943.

Malaria. The rate is 3 for the 4th consecutive, a point well above the rates for the corresponding weeks of 1942 and 1943. The highest rates are in the 11th and 12th Districts. The 6th and 7th Districts report no admissions for this disease.

Measles. The curve for measles continues to follow the seasonal trend recorded in 1942 and 1943. The 9th and 13th Districts report the highest rates and the Potomac and Severn River Commands the lowest.
